The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene. The promoter region was amplified by PCR from leucocyte DNA of over 50 individuals, and sequenced. By PCR from leucocyte DNA of over 50 individuals, and sequenced. PCR from leucocyte DNA of over 50 individuals, and sequenced. PCR from leucocyte DNA of over 50 individuals, and sequenced. CC identified. These were at: base 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature), where the SNP was C to CC dunction and restimated frequency of approximately 20% in the population, and resulting in increased enzyme activity. CC CC function; position 385 (-1235), A to G, approximately 20% frequency, neutral function; position 620 (-1000), G to A, approximately 30% frequency, unknown function; position 940 (-680), CC approximately 30% frequency, unknown function; 1255 (-365), CC approximately 30% frequency, unknown function; 1255 (-365), CC G to A, approximately 30% frequency, unknown function; 1255 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, unknown function; 256 (-365), CC G to A, approximately 30% frequency, u
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         polynucleotide capable of hybridizing to CYP2D6 promoter useful for se optimization of drug therapies using substrates of cytochrome P-450

```
A polynucleotide capable of hybridizing to CYP2D6 promoter useful for the optimization of drug therapies using substrates of cytochrome P-450
                                                                                                                               Human cytochrome P450 CYP2D6 gene promoter (G mutation at -1584 bp).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antagonist, tricyclic antidepressant, selective serotonin reuptake inhibitor, neuroleptic, opiate, cytostatic or amphetamine), or susceptibility to such a disorder, by determining the presence of a muttation in the CYP2D6 promoter. The novel variant forms of the CYP2D6 gene provided by the invention provide the potential for the development of a pharmacodynamic profile of drugs for a given patient. The finding and characterization of variations in the CYP2D6 gene, and diagnostic tests for the discrimination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is that of the promoter region of the human cytochrome P450 CYP2D6 gene, which includes G at position 36 (base -1584 according to the Human Cytochrome P450 Allele Nomenclature). The presence of C at position -1584 bp is a marker for low enzyme activity, whereas there is strong association of G at position -1584 bp with increased enzyme activity. The C to G single nucleotide polymorphism occurs in approximately 20% of the population. The invention provides a method of diagnosing a disorder related to reduced or enhanced capacity for clearance of CYP2D6 substrates (antiarrhythmic, beta adrenergic receptor
                                                                                                                                                                   human;

                                                                                                                                                                  The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobiotics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in ligase-based sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; cytochrome P450; subfamily IID polypeptide 6; CYP2D6; enzyme; chromosome 22q13.1; drug metabolism; detoxification; mono-oxygenase; antiarrhythmic; arrhythmia; adrenoreceptor antagonist; hypertonsion; tricyclic antidpersessant; procainamide; drug induced lupus syndrome; environmentally linked disease; Parkinsons's disease; haplotyping; genotyping; haplotype; genetic variant; single nucleotide polymorphism; SNP; drug screening; drug discovery; gene; ds.

The invention relates to sequence determination oligonucleotides for detecting polymorphic sites in a 5' flanking region of cytochrome P450 2D6 (CYP2D6) gene. CYP2D6 enzymes are involved in the metabolism of many different xenobictics. Human CYP2D6 gene is located on chromosome 22. The oligonucleotides may be used as in situ hybridisation probes, in sprobes in sequenced determination, as components of diagnostic assays, as probes in sequence determination methods based on mismatches, as hybridisation-based diagnostic assays, and as components of diagnostic microarray. CYP2D6 is useful to predict variations in an individual's ability to metabolise certain drugs. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                      Human; cytochrome P450 2D6; CYP2D6; enzyme; detection; xenobiotic; ligase-based sequenced determination; drug metabolism; chromosome 22;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New sequence determination oligonucleotides, useful for detecting polymorphic sites in a 5' flanking region of a CYP2D6 gene, as hybridization probes, as components of diagnostic assays, or in ligase-based sequence determination
                                                                                                                                         ;

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute mycloid leukaemia, Alzheimer's disease, Allb., epilepsy, neurofibromatosis, rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                             The Invention Letters to inver yenes (ABB14678-ABB18001) useful for preventing treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune harmonytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple solerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neerological diseases e.g. carebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal neers the sequence data for this patent did not form part of the printing specification, but was obtained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; open reading frame; ORFX; gene therapy; cancer; cirrhosis; hyperproliferative disorder; psoriasis; benign tumour; haemorrhage; degenerative disorder; osteoarthritis; neurodegenerative disorder; cardiovascular disease; diabetes mellitus; systemic lupus erythematosus; hypertension; hypothyroidism; cholesterol ester storage disease; immune deficiency; immune disorder; infectious disease; autoimmune disorder; rheumatoid arthritis; autoimmune thyroiditis;
                                                                                                                                                                                                      Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -
                                                                                                                                                                                                                                                                                       The invention relates to novel genes (ABA11004-ABA21534) and proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Treated to as open reading frame, ORFX, whore X is 1-11491 (see Table In the specification).

In the specification, ABN15762 to ABN27552 encode the human ORFX proteins given in ABP0010 to ABP11500. ORFX proteins are useful for treating or preventing a pathology associated with an ORFX-associated of its are useful for treating or preventing a pathology associated with an ORFX-associated disorder. ORFX polynocleotide syndrome associated with ORFX-associated disorder. ORFX polynocleotide sequences can be used in gene therapy. ORFX sequences can be used in the therapy. ORFX sequences can be used in the therapy. ORFX sequences can be used in the second disorders, carrivals of liver, psoriasis, benign tumours, keloid, degenerative disorders, insemorrhage, osteoarthritis, neurodegenerative disorders, disorders related to organ transplantation, cardiovascular diseases, disorders related to organ transplantation, cardiovascular diseases, disorders infectious lupus erythematosus, hypertension, hypothyroidism, cholesterol ester storage disease, various immune disorders such as multiple sclerosis, infectious disease, autoimmune thyroiditis, myssthenia gravis, graft-versus-host disease and autoimmune inflammatory eye disease. ORFX proteins are also useful for treating burns, incisions, ulcers, for treating osteoporosis, bone degenerative disorders, or periodontal disease, and for gut protection or regeneration and treatment of lung or liver fibrosis, reperfision injury in various tissues and conditions resulting from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N.B. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.

  The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intext 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. Expression and secretion vectors.
                                                                                                                                                       New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures

proteins and polynucleotides may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate (I) expression. For example, they may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of (I) by expressing inactive proteins or to polynucleotides may be used to produce the secreted (I), by inscrting the nucleic acids into a host cell and culturing the cell to express the protein. (I) proteins and polynucleotides may be used to produce the secreted (I), by inscrting protein. (I) proteins and polynucleotides may be used to prevent and cancers and cancer metastases of haematopoietic-derived cells. AAK64703 to AAK87694 represent human immune/haematopoietic antigen genomic sequences from the present invention. AAK4942 to AAK876950 and AAM8169 represent invention.

       AAA AAA43926 to AAA45925 represent specifically claimed secreted expressed sequence tags (SESTS), isolated from human, mouse, chicken and rat crissue sources. The SESTS can have a range of activities depending on the tissues they were isolated from. The activities include:

CC themotactic; proliferative; immunodulatory; haematopoietic; chemotinetic; analgesic; haemostatic; thrombolytic; antinfilammatory; cytostatic; antibacterial; antifungal; antivital; antidilabetic; antiasthmatic; vulnerary; antidicer; osteopathic; neuroprotective; cantiasthmatic; vulnerary; antidicer; osteopathic; neuroprotective; anticonvulsant; and antidepressant. The SESTs can be used for gene therapy and in vaccines. The SESTs are useful as probes for the conformal swhich correspond to the SESTs. Proteins encoded by the SESTs are useful in assays for determining biological activity and raising antibodies. They may be useful for treatment of autoimmune disorders (authman), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, osteoporosis, osteoarthritis, central nervous system disorders (conficience (Alzheimer's, Parkinson's, Huntington's disease, stroke), coaqulation disorders (themothilia, thrombosis), inflammatory disorders (crohn's disease), tumours, bacterial, fungal or viral infections, depression and in the second of the second of the second of the second of sorders (parket) and sorders (crohn's disease), tumours, bacterial, fungal or viral infections, depression and succession and succession of the second of the second of sorders (crohn's disease), the second of the second of the second of the second of sorders (crohn's disease), the second of second of the second of s

This cDNA sequence encodes the 5' end of a novel secreted protein, H83-22, which is isolated from a clone, H83-22 (ATCC 98028), derived from a human PBMC cDNA library. The nucleic acid and encoded H83-22 secreted protein can be used for research purposes (as markers for tissues, molecular weight markers for gels, primers, probes, etc.), for nutrition (as C, N or carbohydrate source), as a cytokine for cell proliferation and differentiation activity, as immune stimulants or suppressors e.g. for viral, bacterial or fungal infections, for autoimmune diseases such as multiple sclerosis or systemic lupus erythematosus, to requlate haematopoiesis, for tissue growth, as an activin or inhibin, or having chemotactic, chemokinetic, haemostatic and thrombolytic, receptor/ligand,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; molecular weight marker; genetic fingerprinting; antibody production; nutritional supplement; therapy; clone H83_22; peripheral blood mononucleocyte; PBMC; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
Nucleic acids encoding novel secreted proteins - useful e.g. as an anti-inflammatory, immune stimulant or suppressor, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          proteins - having many potential uses, e.g. as immunomodulators, cell proliferation or differentiation inhibitors or haematopoiesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated nucleic acid clones from ATCC 98028 encode novel secreted

This sequence is the 5' portion of clone H83_22', which is a polynuclectide of the invention. This sequence was isolated from a human polynuclectide of the invention. This sequence was isolated from a human peripheral blood monouncleocyte (PBMC) cDNA library. The polynucleotide, which encodes a secreted protein, can be used, e.g. as a tissue or considered protein, can be used, e.g. as a tissue or considered protein trap assays. The protein can be used to assay biological activity, raise antibodies for use in consect to assay biological activity, raise antibodies for use in the protein can be used to assay biological activities (no examples are given to support therapeutic and biological activities (no examples are given to support chis), e.g. cytokine or modulator of cell proliferation and differentiation, immunostimulator of cell proliferation and cifferentiation, immunostimulator, follicle inhibitor/stimulator, chemotactic/chemokinetic, haemostatic, thrombolytic or anti-inflammatory agent, antimicrobial, blorhythm, metabolism or behaviour modifier, anti-depressant or analgesic or psoriasis treatative.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGGCTCTTTTTTTTTTTTTTTV 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand cDNA was prepared with the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        was cloned into the XhoI and BamHI sites. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I. Cloning sites, 13' end: Sall; 3' end: BamHI" 112 c

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).
The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Patent No. 5723581

GENERAL INFORMATION:
APPLICANT: Prendergast, George C.
APPLICANT: Sakamuro, Daitoku

TITLE OF INVENTION: Murine and Human Box-Dependent
TITLE OF INVENTION: MrC-Interacting Protein (BIN1) and Uses Therefor NUMBER OF SEQUENCES: 7

CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   .
